SWING news on the Coupe Icare

Today the [Coupe Icare](#) starts in St. Hillaire du Touvet. Of course we are there and have a lot of new things with us:

NYOS

For the first time we present the [NYOS](#). The [thoroughly successful](#) NEXUS has been developed further to create the NYOS for EN-B pilots. In the process we were able to directly transfer all the positive features of its bigger brother.

The result is a performance-oriented wing, which perfects the new feeling in flight: comfort, stability and manageability, combined with lively handling and superior climbing in thermals.

MITO

Those interested in a beginner's wing, will receive first information on our new MITO. In the current testing phase our focus is on highest passive safety and uncomplicated launch behavior in all conditions and both for the winch and the mountain.

We are looking forward to meeting you on our stand!
